

Exline, Inc. is a family-owned business with over 100 dedicated members. Founded in 1872, it is one of the ten oldest corporations in the state of Kansas. Over the years Exline has provided support to our government and military facilities, performing on-site repairs around the world. We have applied our efforts on behalf of the gathering, refining, compression, transmission, and distribution of petroleum products and natural gas, as well as the generation of electricity here and abroad. Our manufacturing, repair, and service capabilities have supported diverse industries -- such as printing, aircraft, plastics, agriculture, engineering, automotive -- plus the mining of coal, salt, gold, and many other industries. Exline is proud to have developed cooperative partnerships and close associations with companies throughout this spectrum.

About EXLINE

Protection of your equipment is one of our major interests. Exline pneumatic safety devices have been doing just that for over 30 years. With the increased application of electronics and computers to control, monitor, alarm, and shut down equipment, we have introduced our own line of electronic protective devices as well. For positive and efficient engine start-up, nothing can compare to the Exline Air Start Distributor.

Many repairs to equipment have been pioneered and perfected within our walls or applied on site. Our machinists and field service specialists continue to develop innovative ways to repair and improve existing parts and to manufacture new ones.

Exline's thermal spray specialists provide ongoing engineering and development of our Thermex ® Services. From a 10 year guarantee against wear on compressor rods to brand new Thermalloy™ coatings for power cylinder bores, to DuraCoat™ applications for plastics compounding vessels and blades, we produce product enhancement of the highest quality and service available. With these technologies we offer capabilities in repair, manufacturing, products, and services that are unique in the industry.

We've also created a new Mechanical and Technical Service Division to provide qualified crews of mechanics and technicians to perform on-site engine, compressor, and equipment overhauls. They offer preventive maintenance, emergency repairs, device installations, and critical support. Complete units can also be brought into our large, well equipped shop.

Nowhere else will you find this total commitment and capability in support of your industry's needs. We can offer pickup and delivery in most cases. All of us at Exline are dedicated to providing a personal effort and response in quality and service. We invite you to tour our facilities and Experience The Excellence only available at Exline!
